Capsule Proposal

Title:	***DriftService Pro: A Web-Based Operations Management and Financial Monitoring System for Custoworks Car Wash & Detailing***
Proponent(s)/Researcher(s):	***John Michael V. Mujar*** ***Mary Ann S. Lumbria*** ***Mary Joy C. Basiño***
Objectives of the Study ***Objectives should be Specific, Measurable, Achievable, Relevant, Time-bound***	**The main objective of this study is to design and develop a web-based operations management and financial monitoring system that improves efficiency, accuracy, and service quality for Custoworks Car Wash & Detailing**. *Specifically, this study aims to:* • *To design and develop a centralized system that integrates booking, transactions, inventory, and service management.* • *To develop a Smart Point-of-Sale (POS) system that automates service selection, pricing, and payment processing.* • *To create an inventory management system that monitors supplies and performs automatic stock deduction.* • *To design a service workflow tracking system that monitors job orders from start to completion.* • *To implement a QR code-based tracking feature that allows customers to monitor service progress.* • *To develop an online booking and scheduling system that reduces conflicts and improves time management.* • *To create a financial monitoring system that records sales and expenses and generates reports.* • *To implement a notification system that provides real-time updates to users.* • *To design a dashboard analytics feature that presents business data for better decision-making.*
Significance of the Study ***What entities or groups will benefit from your study? Rank them according to who is most directly benefited***	**The result of this study will benefit the following:** • *Business Owner (Custoworks Car Wash & Detailing) – The system will provide centralized monitoring of operations, financial transactions, and staff performance, helping in better decision-making and business growth.* • *Cashier – The system will simplify transaction processing through automated pricing and*

	payment recording, reducing errors and improving speed. • *Staff (Washers/Detailers) – The system will help in organizing tasks, tracking service progress, and improving productivity.* • *Customers – The system will provide convenience through online booking and allow customers to track service status using QR codes, improving satisfaction.* • *Future Researchers – The study will serve as a reference for future development of web-based business management systems.* • *Small and Medium Enterprises (SMEs) – The system can serve as a model for other service-based businesses to improve operations through digital solutions.*
Scope of the Study ***What will be covered (client / timeline) by your study? What do you intend to produce / create? What tools / technologies will you use?***	**This study focuses on the design and development of a web-based operations management and financial monitoring system for Custoworks Car Wash & Detailing.** *The system will cover:* • *Online booking and scheduling* • *Smart Point-of-Sale (POS) system* • *Job order and service workflow tracking* • *QR code-based service monitoring* • *Inventory management with automated stock deduction* • *Staff performance monitoring* • *Financial monitoring and reporting* • *Notification system* • *Dashboard analytics* *The system will be accessible through web browsers on both desktop and mobile devices.*
Limitations of the Study ***What are the <u>uncontrollable</u> factors that will limit your study?***	**The study will be limited to the following:** • *The system is designed specifically for Custoworks Car Wash & Detailing.* • *The financial monitoring is limited to basic sales and expense tracking only.* • *The system does not include advanced accounting features such as payroll and tax computation.* • *Payment integration is limited and does not include full banking or third-party payment systems.* • *Inventory management does not include supplier or purchase order management.* • *The system depends on stable internet connectivity.* • *Testing is conducted on a limited number of users only.*
Delimitations of the Study	**The study is limited to:**

What constraints will you impose upon your project to make sure it can be completed within the given time?	• Service-based operations such as car wash and auto detailing • Authorized users including administrator, cashier, staff, and customers • System features related to booking, transactions, inventory, workflow tracking, and reporting • Data collected within the duration of the study
Project Features ***What are the foreseen useful IT-based attributes of your proposed project?***	**The proposed system will include the following features:** • *Online booking and scheduling system* • *Smart Point-of-Sale (POS) system* • *Job order and service workflow tracking* • *QR code-based service monitoring* • *Automated inventory management* • *Staff performance monitoring* • *Financial monitoring and reporting* • *Real-time notification system* • *Dashboard analytics* • *Role-Based Access Control (RBAC)*
Relevant Skills and Experiences **Briefly and concisely explain your technical and non-technical skills, as well as the relevant experience that make you qualified to carry out this project (Not more than 300 words)**	*The researchers have basic skills in programming, web development, and database management. They also have knowledge of the System Development Life Cycle (SDLC). The researchers understand how business operations work, especially in booking, transactions, and inventory.* *These skills are enough to support the development of the proposed system.*
Requested Adviser:	Mr. Mark Joeven S. Entico
Capstone Coordinator:	Mr. Lance Stephen L. Bronzal
